INTEGRITY PRODUCTS

Pipe **Seal**

Always wear appropriate PPE (personal protective equipment) which conforms to applicable work safe standards. ⚠

A

— GROOVE FOR BANDING
— GROOVE FOR CLADDING

## TOOLS REQUIRED
SILICONE SEALANT

BANDING

TIN SNIPS

1

STEP 1
Apply Sealant around the inner circumference of the Integrity Pipe Seal as well as on the connecting faces of the left and right sides.

2

STEP 2A
Install left and right sides of the Integrity Pipe Seal around the pipe protrusion.
2

STEP 2B
If the application is not in the 12-clock position, ensure that the tabs face over the bottom section to allow for watershed.

NOTE: We recommend using the Integrity Pipe Seal in conjunction with our other products as part of a comprehensive CUI mitigation strategy. The Integrity Pipe Seal is available in various sizes and can be used with all insulation types.
3

STEP 3
Insert the banding in the groove and tightly secure it into place. Apply a bead of sealant around the top circumference of the Integrity Pipe Seal.

4

STEP 4
Apply a bead of sealant around the cladding groove at the base of the Integrity Pipe Seal.

5

PIPE ½"

STEP 5
To accommodate the Integrity Pipe Seal, cut a hole in the cladding 1/2″ larger than the pipe size to which the Integrity Pipe Seal is being applied.

6

STEP 6
Once Cladding is installed, add a bead of sealant around the outer circumference of the Integrity Pipe Seal.
