Termination Gasket

Each year Oil & Gas companies spend significant resources on dealing with the consequences from corrosion under insulation (CUI) and replacing water damaged insulation. One way to prevent CUI and water damage is to assure that the insulation system used is watertight. At end cap or bevel terminations it's therefore critical that the insulation system does not allow any water ingress.

THE SOLUTION Integrity Products Termination Gasket

**Ensures Completely
Watertight Terminations**

**Allows
Compartmentalization of
The Insulation System**

**Quick and Easy
to Install**

**Made from High Quality
Silicone Compound**

**Temperature Range:
-150°F to 450°F
(-101°C to 232°C)**

SAFE. SIMPLE. SMART.

- **OFFERS** an insulation friendly termination
- **NO RISK** of cutting injuries to personnel | no risk of damage to heat tracing or the coating system
- **EASY** to install | Saves time
- **SAVES MONEY** by avoiding future maintenance costs and failures caused by CUI
- **NO NEED** for specially qualified metal working personnel for installation
- **PATENTED** technology and design

SAFETY IMPACT

Helping you Become a Safer Employer

- **TERMINATION GASKET** eliminates injuries from sharp edges caused metal end cap and bevel terminations
- **TERMINATION GASKET** reduces the risk of failures caused by CUI
- **TERMINATION GASKET** saves time and cost with easy installation—package includes all items required for install
